

An In-House LMS

One platform to build, deliver and track training across the entire workforce — technical, behavioural and managerial — built and owned by us.

The Unified Objective

A Single Home for Learning

Today, corporate training records, content, and compliance data are scattered across multiple formats, drives, and disconnected vendors.

A unified LMS transforms this into one governed, measurable capability. It ensures every employee can access necessary training seamlessly, whether at their desk or working remotely.

Current Status

Ready

PHASE 1 PILOT

Pilot Already Developed

A standalone pilot LMS has been built entirely in-house, formulated with comprehensive input from the Strategy Group.

It is currently populated with test data, featuring fully functional interactive dashboards for both individual learners and management. The system is ready to be mounted on our Data Centre infrastructure.

Key Platform Features

Course Authoring

Empowers authorized departments to intuitively construct multi-section courses with attached quizzes and automated scoring logic.

Rich Media Support

Natively handles industry-standard SCORM modules alongside video, PDF, HTML, and rich image-based internal content.

Device Agnostic

Engineered for eventual deployment across laptops, tablets, and mobile devices, ensuring learning is accessible anywhere.

Near Real-Time Analytics

- **Individual Dashboard:** Grants employees instant visibility into completed courses, current progress, and precise assessment scores.
- **Controlling Officer View:** Delivers at-a-glance team-wide tracking, instantly highlighting compliance status and overdue learning.
- **Line-of-Sight Transparency:** Training progress rolls upward automatically, allowing leadership to view aggregated organizational capability.

A placeholder for a clean modern UI dashboard graphic, represented by a large, empty rounded rectangle with a light blue border. The text "Clean modern UI dashboard graphic" is written in a small, light blue font at the top left of the rectangle.

The Business Case: Build vs. Buy

Buy Off-the-Shelf

Purchased platforms trap organizations in recurring, per-user license fees that penalize headcount growth. Core learner data is pushed to third-party clouds, and custom integrations (like deep SAP syncing) often require expensive, slow vendor change requests.

Build In-House

A custom solution means zero recurring licensing costs. It ensures absolute data sovereignty entirely within our Data Centre. We retain the architectural freedom to ingest custom content types and build seamless workflows that fit our exact processes.

Validation & Infrastructure

The Data Centre Group will provide robust on-premise hardware, while the Strategy Group formally validates the pilot's performance.

Content Curation

COMPANY Academy and ATI-GOA will collaborate with SMEs to structure and curate targeted technical and behavioural training.

Implementation & Support

The Execution Committee will oversee the rollout and upload content, handing off day-to-day operations to the Academy.

Enterprise System Sync

The designated HR Team Lead will ensure seamless data integration, allowing assessment

The Operational Flow

Staged Implementation Plan

PHASE	MILESTONE ACTION	TARGET TIMEFRAME
Stage 1	Validate pilot on Data Centre hardware using dummy data	Within 15 days of IT allocation
Stage 2	Open system to test cohort (~10 users) with genuine content	Immediate Post-Validation
Stage 4	Curate and migrate comprehensive course library	Parallel to Phase 2
Stage 5	Scale platform capacity to full organizational headcount	Strategic Go-Live
Stage 6	Deploy device-agnostic accessibility (Mobile, Tablet)	Post-Launch Optimisation

Testing Stage Prerequisites

IT Allocation: A modest initial server/VM footprint from the Data Centre (1-2 hosts, ~500GB storage).

 Diverse professional corporate team

Test Group: Access granted to roughly 10 cross-functional users to stress-test the UX and dashboards.

Sample Content: A controlled list of readily available training videos and PDFs to run through the logic.

The ROI of Ownership

Long-Term Cost Avoidance

Deploying this in-house system provides immediate unification of our training capabilities without triggering the heavy, recurring OPEX associated with commercial SaaS products.

Management gains near real-time, transparent progress reporting across the entire organization, while maintaining absolute data sovereignty and effectively zero per-employee license fees over the next decade.

The Recommendation

We request management approval to formally allocate Phase 1 Data Centre resources and initiate the in-house pilot rollout.

THANK YOU FOR YOUR TIME.
